

# Stroke Care Bundle

Each month NHS trusts monitor their performance in the delivery of care bundles, and report it nationally to NHS England. Using this data, NHS England are able to monitor the standard of care delivered to stroke patients. NHS England has developed a stroke care bundle, which specifically outlines key components that provide the best evidence-based care for this particular patient group, and must be undertaken for each patient who has the signs and symptoms of a stroke.

Component of care bundle	Exceptions
Findings from FAST assessment recorded	<ul style="list-style-type: none"><li>● Patient refusal</li><li>● Patient unable to undertake assessment</li></ul>
Blood glucose recorded	<ul style="list-style-type: none"><li>● Patient refusal</li></ul>
Blood pressure recorded	<ul style="list-style-type: none"><li>● Patient refusal</li></ul>
